

EVENTFORCE MANAGEMENT SYSTEM - SALESFORCE IMPLEMENTATION

Business Name: EventForce Management System

Objectives

The primary objective of building the EventForce Management System is to create a comprehensive CRM platform that digitizes and automates event management operations for Event Planner Solutions. This system aims to streamline client bookings, venue reservations, vendor coordination, and feedback collection while providing real-time visibility into event operations.

By implementing this Salesforce solution, the business will achieve better customer relationship management through centralized data, automated workflows, and improved collaboration among event coordinators, vendor managers, and clients. The CRM will deliver significant business value by reducing manual processes by 60%, improving booking efficiency by 40%, enhancing client satisfaction through timely communications, and providing data-driven insights for business growth through integrated reporting and analytics.

Phase 1: Requirement Analysis & Planning

Build an EventForce Management System in Salesforce to help event planners manage client bookings, vendor coordination, venue reservations, and feedback collection — all within a single CRM platform. The system automates key processes such as event scheduling, cancellation approvals, and client reminders, while providing real-time visibility through reports and dashboards.

Functional Scope

- Custom objects: Event, Client, Vendor, Venue, Feedback, and Event Vendor (Junction Object).
- Relationship modeling: Lookup, Master-Detail, and Many-to-Many (Event ↔ Vendor).
- Automation using Flows for reminders, feedback notifications, and approval updates.
- Validation Rules and Formula Fields to ensure accurate data entry and event budget calculation.
- Approval Processes for event cancellation requests with email alerts to coordinators and clients.
- Profiles, Roles, and Permission Sets to manage user-level access and security.
- Reports and Dashboards for event summary, vendor performance, and upcoming event insights.

Stakeholder Mapping

- **Clients:** Request event services, provide feedback, and view event updates.
- **Event Coordinators:** Manage event scheduling, client communication, and approval workflows.
- **Vendors:** Handle assigned event services like catering, decor, and logistics.
- **Venue Managers:** Manage venue availability and reservations.
- **Event Administrators:** Oversee system operations, security, and data monitoring.

Execution Roadmap

1. Object & Field Setup – Creation of Event, Client, Vendor, Venue, Feedback, and Event Vendor objects.
2. Automation Flows – Implement record-triggered flows for event reminders and approvals.
3. Validation Rules & Formula Fields – Enforce data accuracy and budget calculations.
4. Profiles, Roles, and Permission Sets – Configure user access and record visibility.
5. Approval Process – Automate event cancellation request workflow with notifications.
6. Apex Classes & Triggers – Update venue availability and prevent double bookings.
7. Reports & Dashboards – Create analytics for upcoming events and performance insights.

Phase 2: Backend Development & Configurations

The Backend & Configuration phase built the core functional engine of the EventForce Management System. Using a combination of Salesforce Flows, Apex logic, and Security configurations, this phase focused on developing the system's automation backbone to manage events, clients, vendors, venues, and feedback efficiently.

Declarative tools such as Record-Triggered Flows, Validation Rules, Formula Fields, and Approval Processes were used extensively to automate booking confirmations, reminders, and cancellation approvals. Meanwhile, Apex Classes and Triggers handled advanced business logic like venue availability updates and preventing double bookings, ensuring operational accuracy and scalability.

The phase also included implementing Profiles, Roles, Permission Sets, and Sharing Rules to define user-level access, maintaining data integrity and security across all modules. Altogether, this phase transformed the EventForce application from a static structure into a dynamic, automated, and secure CRM system capable of handling real-world event management workflows.

Milestone 1: Salesforce Account

What Is Salesforce?

Salesforce is your customer success platform, designed to help you sell, service, market, analyze, and connect with your customers. Salesforce has everything you need to run your business from anywhere. Using standard products and features, you can manage relationships with prospects and customers, collaborate and engage with employees and partners, and store your data securely in the cloud.

Activity 1: Creating Developer Account

Creating a developer org in Salesforce.

1. Go to <https://developer.salesforce.com/signup>
2. On the sign-up form, enter:
 - First name & Last name
 - Email
 - Role: Developer

- Company: College Name
- Country: India
- Postal Code: PIN code
- Username: A combination of your name and company

The username need not be an actual email ID. You can use the format `username@organization.com`.

Click Sign Me Up after filling in the details.

Activity 2: Account Activation

1. Go to the inbox of the email used while signing up.
2. Click the verification email to activate the account. The email may take 5–10 minutes.
3. Click Verify Account.
4. Enter a password and answer the security question.
5. Click Change Password.
6. You will be redirected to your Salesforce setup page.

Data Architecture

Created Custom Objects

1. Event__c
 - Fields: Event Name, Event Date, Event Type, Event Status, Event Budget
2. Client__c
 - Fields: Client Name, Email, Phone, Address, Country, City
3. Vendor__c
 - Fields: Vendor Name, Email, Phone, Service Type, Status
4. Venue__c
 - Fields: Venue Name, Address, Location (URL), Capacity, Availability Status
5. Feedback__c
 - Fields: Feedback ID (Auto Number), Rating, Comments
6. EventVendor__c (Junction Object)
 - Links Event ↔ Vendor for Many-to-Many relationship

Relationships

Relationship	Type
Event → Client	Lookup
Event → Venue	Lookup
Feedback → Event	Lookup
Feedback → Client	Lookup
EventVendor → Event	Master-Detail
EventVendor → Vendor	Master-Detail

Milestone 2: Objects

What is an Object?

Salesforce objects are database tables that permit you to store data that is specific to an organization. They consist of fields (columns) and records (rows).

In This Application We Use 5 Custom Objects

1. Event
2. Client
3. Vendor
4. Venue
5. Feedback

Activity 1: Create Event Object

To create a custom object:

1. From Setup, click Object Manager.
2. Click Create and select Custom Object.
3. Fill in the label as Event.
4. Fill in the plural label as Events.
5. Record Name: Event Name.
6. Select the data type as Text.
7. In the Optional Features section, select:
 - Allow Reports
 - Allow Activities
 - Track Field History
8. In the Deployment Status section, ensure Deployed is selected.
9. In the Search Status section, select Allow Search.
10. In Object Creation Options, select ****Add Notes and Attachments related list to default page layout****.

11. Leave everything else as default and click ****Save****.

Activity 2: Create Client Object

1. Click the gear icon and select Setup.
2. Click Object Manager.
3. Click Create and select Custom Object.
4. Create the object as follows:
 - Label: Client
 - Plural Label: Clients
 - Record Name: Client Name
 - Data Type: Text
 - Allow Reports: Checked
 - Allow Search: Checked
 - Add Notes and Attachments related list to default page layout: Checked
5. Click Save.

Activity 3: Create Vendor Object

1. Click the gear icon and select Setup.
2. Click Object Manager.
3. Click Create and select Custom Object.
4. Create the object as follows:
 - Label: Vendor
 - Plural Label: Vendors
 - Record Name: Vendor Name
 - Data Type: Text
 - Allow Reports: Checked
 - Allow Search: Checked
 - Add Notes and Attachments related list to default page layout: Checked
5. Click Save.

Activity 4: Create Venue Object

1. Click the gear icon and select Setup.
2. Click Object Manager.
3. Click Create and select Custom Object.
4. Create the object as follows:
 - Label: Venue
 - Plural Label: Venues

- Record Name: Venue Name
 - Data Type: Text
 - Allow Reports: Checked
 - Allow Search: Checked
 - Add Notes and Attachments related list to default page layout: Checked
5. Click Save.

Activity 5: Create Feedback Object

1. Click the gear icon and select Setup.
2. Click Object Manager.
3. Click Create and select Custom Object.
4. Create the object as follows:
 - Label: Feedback
 - Plural Label: Feedbacks
 - Record Name: Feedback
 - Data Type: Auto Number
 - Display Format: `F-{0000}`
 - Starting Number: `0`
 - Allow Reports: Checked
 - Allow Search: Checked
 - Add Notes and Attachments related list to default page layout: Checked
5. Click Save.

Milestone 3: Tabs

What is a Tab?

Tabs in Salesforce help users view information at a glance. They display data from objects and other web content in the application.

Standard Object Tabs

Standard object tabs display data related to standard objects.

Custom Object Tabs

Custom object tabs display data related to custom objects. These tabs look and function similarly to standard tabs.

Activity 1: Creating a Custom Tab (Event)

1. Click the Home tab.
2. Enter Tabs in Quick Find and select Tabs.
3. Under Custom Object Tabs, click New.
4. For Object, select Event.
5. For Tab Style, select any icon.
6. Leave all defaults as they are.
7. Click Next, Next, and Save.

Activity 2: Creating a Custom Tab (Client)

1. Click the Home tab.
2. Enter Tabs in Quick Find and select Tabs.
3. Under Custom Object Tabs, click New.
4. For Object, select Client.
5. For Tab Style, select any icon.
6. Leave all defaults as they are.
7. Click Next, Next, and Save.

Activity 3: Creating a Custom Tab (Vendor)

1. Click the Home tab.
2. Enter Tabs in Quick Find and select Tabs.
3. Under Custom Object Tabs, click New.
4. For Object, select Vendor.
5. For Tab Style, select any icon.
6. Leave all defaults as they are.
7. Click Next, Next, and Save.

Upcoming Implementation Sections

The following sections will cover the remaining EventForce Management System implementation:

1. Custom Fields and Relationships
2. Event–Client and Event–Venue Relationships
3. Event Vendor Junction Object
4. Record-Triggered Flows
5. Schedule-Triggered Flows
6. Validation Rules
7. Formula Fields

8. Profiles, Roles, Permission Sets, and Sharing Rules

9. Approval Process

10. Apex Classes and Triggers

11. Reports

12. Dashboards

13. Testing and Maintenance
